E-commerce Pricing Strategy

Pricing Strategies **定价策略**

Value-based pricing — price set by what customers think it is worth

Cost-plus pricing — the cost, plus a fixed markup on top

Competitive pricing — match what other sellers are charging

Economy pricing — the cheapest option, with no extras

Penetration pricing — a very low price at launch to win users

Dynamic pricing — the price changes with demand and the hour

Price skimming — high at first, lower once rivals catch up

Hourly pricing — the customer pays by the hour

Project-based pricing — one price for the whole job

High-low pricing — a normal price, with deep sale days

Bundle pricing — several items together for less

Geographic pricing — different prices in different places

Psychological pricing — 9.9 instead of 10

Freemium pricing — a free basic plan, paid upgrades

Premium pricing — a high price to signal high quality

Subscription pricing — pay by the month or the year

Products **产品**

Apps with VIP services · Luxury goods · Cars · Clothes

Smartphones · Furniture · Fast food · Food chains

Delivery · Phone cases · Toiletries · Airlines

Ridesharing · Hotels · New medicines · High-end electronics

Gym memberships

Case Study

Pick one product above and one pricing strategy. Explain the match.

Discussion

What are the advantages and disadvantages of shopping online?

Do you shop more on your phone or on a computer? Which is easier?

Have you ever felt frustrated while shopping online? What happened?

Do you trust apps and websites with your card details? Why or why not?

How much do you care about return policies before you buy?

Can you tell when a post is an ad? Have you ever been fooled by one?

Do you believe the reviews on a product page? Why or why not?

What makes you wait for a discount or a sale?
